

PROF DR J. TINBERGEN

THE HAGUE, 18 September 1950
Sijzenlaan 41

Prof. Dr Seymour E. Harris,
Editor of the
REVIEW OF ECONOMICS AND
STATISTICS
322, Littauer Center,
Cambridge 38, Mass.
U.S.A.

Dear Dr Harris,

I am very glad to give you some particulars
about Dr Verdoorn and his book.

Dr Verdoorn studied economics at the
University of Amsterdam and took his doctor degree in
Rotterdam; I acted as his promotor. His thesis consisted
in a statistical analysis of the phenomenon of fixed
costs. He showed that there is no evidence to believe
that since 1870 the ratio between fixed and variable costs
changed very much, and he tried to make it understandable
in which, I think, he succeeded. Dr Verdoorn is now chief
of the research section of the Central Planning Office
for the Dutch Government.

His book on market analyses is in my
opinion a very good one. In fact he succeeded in giving a
very clear treatment of the statistical and econometric
methods used in market analyses in a rather simple form
and with a large number of applications on concrete cases.
The book therefore at the same time represents a compendium
of practical work that has been done in this field. I
warmly recommend the book for translation.

Yours very sincerely,

PROF DR J. TIMBERGEN
