Professor Lloyd G. Reynolds,
Chairman of the Department
of Economics,
Yale University,
New Haven, Connecticut

Dear Professor Reynolds,

On your request I also give you my appraisal of Professor Jacon Marschak. Marschak is also one of the leading econometricists of the world. He made very important contributions to the field of mathematical economics, e.g. to the theory of uncertainty and to the theory of demand and supply of financial assets as well as to the general theory of economic structure and its measurement. His contributions cover a wide field of different subjects of which those mentioned are only the most important ones. They will be found in various publications of the Cowles Commission and in a number of journals, in particular Econometrica. His writings are characterized by very careful formulation and great clarity and he is able to explain matters to younger students very well.

It is difficult to choose between Marschak and Koopmans. I think Koopmans shows greater originality. Both are, however, excellent scholars and teachers.

I take it that both my letters will be considered confidential.

Yours very sincerely,

The Hague, 2 October 1954
